

It provides a convenient way to supplement essential trace elements, helping address subclinical deficiencies that may impact health, fertility and overall performance.

With a low-volume dose, Acti-Trace with B12 allows for targeted supplementation when it's needed most – including weaning, drying up, joining, calving and lactation.

Features & Benefits

- Multi-mineral and vitamin formulation for cattle.
- Contains essential trace elements and Vitamin B12.
- Supports health, fertility and overall performance.
- Helps address subclinical mineral deficiencies Low-volume injection for convenient, targeted supplementation.

- Suitable for use during periods of stress or high energy demand Vitamin B12 to support metabolic function.

Active Constituents

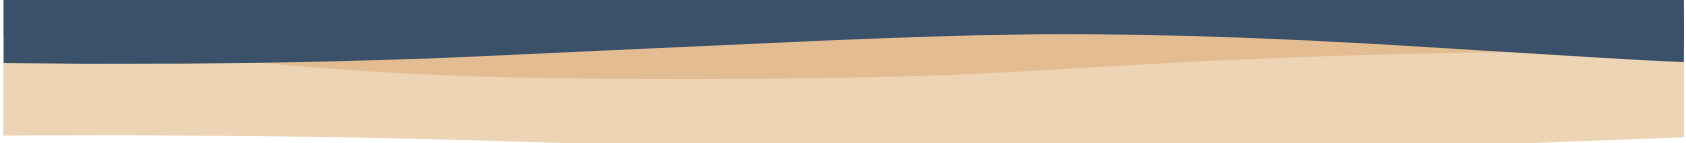

Zinc 40 g/L (as disodium zinc EDTA), Copper 15 g/L (as disodium copper EDTA), Manganese 10 g/L (as disodium manganese EDTA), Selenium 5 g/L (as sodium selenite) and Vitamin B12 (cyanocobalamin) 1.4 g/L.

The inclusion of EDTA-chelated trace minerals supports availability for uptake and utilisation.

When to Use

Subclinical mineral deficiencies can occur even where no obvious signs are present, potentially impacting productivity and performance. Targeted supplementation can help support animals through these periods. Acti-Trace Plus B12 may be used to support cattle:

- During periods of high energy demand

- 
- At key production stages (weaning, drying up, joining, calving, lactation)
 - When pasture or feed quality may limit mineral intake
 - During seasonal or environmental stress

How It Works

Acti-Trace Plus B12 provides a combination of essential trace minerals involved in:

- immune function
- reproductive performance
- metabolic activity

- 
- growth and development

Vitamin B12 plays a key role in energy metabolism, particularly during periods of increased demand or reduced intake.

Directions for Use

Administer by subcutaneous injection.

Dose rates:

Up to 1 year: 1 mL per 50 kg

1–2 years: 1 mL per 75 kg

Over 2 years: 1 mL per 100 kg

Please consult the label for additional dosage information.

Withholding Periods

Meat: Nil (0 days)

Milk: Zero (0) days

Export Slaughter Interval (ESI)

ESI: Zero (0) days

Storage

Store below 30°C (room temperature). If opened, dispose after 9 months.

Magnesium and Vitamin E contains high levels of Magnesium, Vitamin E and Vitamin B1 to assist calming nervous, anxious horses. Vitamin E is a powerful anti-oxidant that reduces free radical damage and subsequent muscle pain following exercise, improving recovery times.

Quick Facts & Benefits: This supplement contains chelated Magnesium and bioavailable Vitamin B1 and Vitamin E to allow maximum absorption and utilisation. Magnesium, Vitamin E and Vitamin B1 are key nutrients that provide the building blocks for muscle and nerve function in horses.

Daily Intake:

Initial Dose (10 days) feed maintenance dose twice daily.

Maintenance Dose:

Heavy Horses (600kg) – 20-25g once daily

Medium Horses (400kg) – 15g once daily

Light Horses (300kg) – 10g once daily

Active Constituent: per kg: Magnesium (as chelate & oxide) 90g, Vitamin E 63000IU, Vitamin B1 6.5g. Contains Brewer's Yeast.

Quick Facts & Benefits: iO Raw Linseed Oil improves coat, skin and condition, as well as improving energy levels. Can also be useful aid in weight gain. iO Raw Linseed Oil is also ideal for sealing timber, fences and gazebos and other timber products either internally or externally. Linseed or flax is the only oil seed that contains roughly the same ratio of omega-3 fatty acids (anti inflammatory) to omega-6 fatty acids (pro inflammatory) as grass.

Not suitable for sealed/finished timber surfaces.

As long as the surface bearing the linseed oil has not been damaged, iO Raw Linseed Oil provides the following benefits:

Water resistant. Water left on the surface may penetrate given enough time.

Flexible. Oil finishes continue to protect as the wood expands and contract.

Accentuates the texture and grain of the wood.

Active Constituent: A colourless to yellowish oil obtained from the dried, ripened seeds of the flax plant.

Also aids in the treatment of acetoanaemia (ketosis) in cattle and pregnancy toxaemia in sheep.

Made in Australia.

Controls & Prevents: A clear, colourless liquid, Propylene Glycol is indicated as an aid in the treatment of acetoanaemia (ketosis) of cattle. Propylene glycol acts as a glucose precursor, triggering the production of more glucose from the liver. This will help elevate blood glucose level, assist removal of ketones and accelerate general metabolic function.

Dose Rates & Administration Instructions:

CATTLE: 240mL morning and evening for 2 days. For next 2 days, reduce to 120mL morning and evening.

SHEEP: 125mL daily. Treatment can be given for up to 10 days.

NIL Withholding period. iO K-Dex Energy can be drenched or used on feed with simple dosing options available.

Active Constituent: 1000ml/L Propylene Glycol

Helps increase horses appetite and acts as a fly repellent.

Reduces blood pressure and purifies blood.

May help to eliminate parasites and worms.

Quick Facts & Benefits: Garlic is also rich in selenium and sulphur. If an overdose of garlic is provided and more red blood cells are prematurely damaged, your horse becomes anaemic. When fungi or other soil pathogens attack the cloves, allicin is released and the anti-bacterial, antiseptic and antibiotic action takes place.

Packaged in Australia from imported garlic.

It's also known to reduce equine obesity, and can lessen the risk of laminitis in animals prone to it during periods of strong spring grass growth. Magnesium plays an important role in nerve and muscle function, and horses deficient in this important element can show signs of nervousness, wariness, excitability, and muscle tremors.

Controls & Prevents: iO Epsom salts can also be used to ease joint pain in a horse. Soak its legs in a bucket of warm water to which you have added one cup of magnesium sulphate. This will help reduce the appearance of windgalls and the inflammation around a strained tendon or ligament. Older, arthritic horses will benefit from a 25-minute leg soak.

Does your horse suffer from dandruff? Try an iO Epsom salts scrub. Mix handfuls of Epsom salts with a small amount of water and gently massage your horse in circular motions, then rinse off. This will leave its body feeling soft and the blood flow will be temporarily increased in the areas massaged. This will flush toxins and bring nutrients with the new blood flow.

iO Epsom Salts are also good for Insect bites, Wounds, Repellent, Laxatives, Fabric Softener and Conditioner in horses.

Due to its saline properties, it can be absorbed into the skin, as well be used to treat colics and hoof abscesses. It can also be used IV is used to treat cases of anti-arrhythmics in equines.

Active Constituent: Epsom Salts (Magnesium sulphate)

Quick Facts & Benefits: Electrolytes can be used to encourage drinking (e.g. during transport or if horse doesn't like to drink away from home). Usually thirst/drinking is stimulated within 3-4 hours after dosing. Horses administered any form of electrolytes need to be consuming adequate water. Electrolytes should never be force fed to a dehydrated horse, and any horses supplemented with electrolytes should be monitored for dehydration (skin pinch test, mucous membrane color and hydration, capillary refill).

Dose Rates & Administration Instructions: The rate of use should correspond to sweat loss. Give daily, dividing the dose and mixing 1 scoop with each feed. Scoop provided is equivalent to 30gm.

Heavy work – intensive exercise: 90g daily

Moderate work: 60g daily

Light work – heavy environment: 30g daily.

The use of this product prior to racing will not elevate plasma bicarbonate levels and therefore will not contravene the rules of racing.

Active Constituent: Each kg contains: Chloride 480.0gm, Sodium 233.3gm, Potassium 133.0gm, Magnesium 17.0gm, Glucose 95.2gm

iO Electrolyte Liquid is great and beneficial for: Fluid and body salt replacement after exercise, encourages drinking at competition & rapid recovery after travelling. With a handy portable container, the iO Electrolyte Liquid allows you to take this to shows, games, events or even carry around the paddocks!

iO Electrolyte Liquid is highly palatable powder that maintains optimum body fluid balance.

Made in Australia.

Quick Facts & Benefits: iO Electrolyte Liquid for Horses is a palatable apple flavour which allows for a wider acceptance by horses.

As iO Electrolyte Liquid for Horses can be used immediately, there is no need to wait

for the horse's next meal to replenish any electrolytes that may have been lost. iO Electrolyte Liquid for Horses has been designed for the specific needs of horses of all disciplines to rapidly replace fluids and body salts lost, and contains a high rate of electrolytes per mL.

Dose Rates & Administration Instructions: Rate of Use: Always make sure there is plenty of fresh, clean water available following the intake of this liquid. Horses 450kg to 500kg: Light work – 40ml in 2L of water. Moderate work – 60ml in 3L of water. Heavy work – 80ml in 4L of water.

For severely dehydrated horses: 6L to 8L of diluted solution (40ml iO Electrolyte Liquid/L of Water)

Travelling horses: 40ml to 60ml over the tongue with water during hot weather or long distances, 30 to 60 minutes before travelling. Repeat every 2 hours and again on arrival.

Active Constituent: Each litre contains: Chloride 63.96gm, Sodium 40.45gm, Potassium 30.36gm, Phosphate 23.17gm, Sulphate 11.59gm, Magnesium 2.93gm, Glucose 260gm

iO Copper Sulphate can be made into a paste to assist in removing seedy toe in horses.

iO Copper Sulphate also works as a prevention and treatment of copper deficiency.

It helps reduce inflammation, form strong bones, joints and blood vessels and maintain hair colour.

Product of Australia.

Quick Facts & Benefits: Copper deficiency is often seen in late winter or spring on rapidly growing grassy pastures. Which animals are most at risk? Newborn or young lambs; pregnant, lactating and growing sheep and cattle; sheep and cattle that have been grazed at excessive stocking rates; cattle with heavy worm (*Ostertagia*) infestations; cattle are more susceptible than sheep to a copper deficiency.

Used as a regular part of feeding, it is believed to assist with arthritis and joint conditions. Apple cider vinegar helps acidify the stomach for optimum digestion.

Quick Facts & Benefits: As a natural insect control, Apple Cider Vinegar has been known to cause thiamine (Vitamin B1) to be excreted through the skin, repelling flies and mosquitoes. Optimum levels of B vitamins (particularly B1) in the body seem to discourage bugs.

Can also be used for dogs.

Dose Rates & Administration Instructions:

Horses : 60mL per animal per day

Cattle : 250mL per animal per day

Active Constituent: Apple Cider Vinegar is prepared from low acid, low tannin dessert apples, which are crushed and then fermented. The product appears cloudy but settles to form a sediment or curd at the bottom of the container.

Used as a regular part of feeding, it is believed to assist with arthritis and joint conditions. Apple cider vinegar helps acidify the stomach for optimum digestion.

Quick Facts & Benefits: As a natural insect control, Apple Cider Vinegar has been known to cause thiamine (Vitamin B1) to be excreted through the skin, repelling flies and mosquitoes. Optimum levels of B vitamins (particularly B1) in the body seem to discourage bugs

Dose Rates & Administration Instructions:

Horses: 30 – 60mL per animal per day

Cattle: 250mL per animal per day

Active Constituent: Thiamine (Vitamin B1) has a role in promoting carbohydrate metabolism providing increased energy. Vitamin B1 also has a role in nerve function. Some claim it calms animals. Whilst others claim it aids in heart and muscle function.

Apple Cider Vinegar is prepared from low acid, low tannin dessert apples, which are crushed and then fermented. The product appears cloudy but settles to form a sediment or curd at the bottom of the container. Apple Cider Vinegar also contains Vitamin B1 2g/L. Horses are able to synthesise Vitamin B1 in the colon by bacterial action, however, further supplement of this vitamin is beneficial in horses fed poor quality pasture, hay and grain.

Product Composition: Zinc 40.0 g/L, Copper 15.0 g/L, Manganese 10.0 g/L, Selenium 5.0 g/L

Available in the following sizes: 500mL

Why Use Acti-Trace:

- Boosts availability of essential trace minerals in 'high demand' periods.
- Absorbed into the blood within 8 hours and the liver within 24 hours.
- Prolonged antioxidant action for months.
- Balanced, chelated, and water-based formulation

Dosage & administration: ACTI-TRACE is given by subcutaneous injection at the dose rate recommended below:

- Up to 1 year: 1 mL/50 kg
- 1-2 years: 1 mL/75 kg
- Over 2 years: 1 mL/100 kg

Withholding Periods: Nil.

Storage: Store below 30°C (room temperature). If opened, dispose after 9 months.

iO Potassium Chloride acts as an electrolyte that horses need to supplement heavy training or heavy workloads. Horses involved in heavy training should have their feed supplemented with salt and minerals for horses to replenish neuromuscular nutrients lost in perspiration.

Quick Facts & Benefits:

Electrolytes are minerals that occur in your horse's body in a charged form and are essential to the functioning of many physiological systems. Replenishes essential nutrients lost during sweat or intense exercise that help with post-event recovery including Sodium, Potassium, Chloride, Calcium and Magnesium.

Made in Australia.

As paraffin oil is not absorbed by animal cells or tissue, it acts as a lubricant, allowing for more easily excreted manure and sand from the stomach.

Quick Facts & Benefits: iO Neatsfoot Oil repels water and protects against stiffening and cracking.

Active Constituent: Liquid paraffin oil is a mineral oil, and is a by-product of petroleum distillation. It is transparent, colorless, odorless and tasteless oil, which is mainly composed of heavier alkanes. It is not soluble in water and is known to have low reactivity.

iO Cod Liver Oil is a special veterinary grade of oil that has not gone through heat treated deodorisation, that many other Cod Liver oils are subject to and allows for maximum naturally occurring Vitamin A and D. iO Cod Liver Oil can also be used for many other animals with joint and bone pain, inflamed areas and dull coats.

Quick Facts & Benefits: iO Cod Liver oil is a superb source of decosahexenoic acid, which is also known as DHA, and eicosapentaenoic acid, which is also known as EPA.

This maintains equine joint flexibility, promotes a healthy glossy coat, boosts your horses immune system, can work as an anti-inflammatory, has anti-allergic properties and encourages a strong metabolism.

Always seek advice from your local veterinary professional.

Active Constituent: Atlantic cod and Pacific cod are most commonly used to make cod liver oil. The fish get their omega-3 fatty acids by eating phytoplankton, which absorb microalgae. Microalgae is the original source of rich omega-3 fatty acids.
