Starmec Injection will treat and control internal parasites including gastrointestinal roundworms, lungworms, eyeworms, sucking and biting lice, mites and cattle tick in cattle.

Active Constituent: 10mg/ml Ivermectin

Available in the following sizes: 500ML

Applicator: 20ml Injector (Drencher with conversion kit)

Dosing & Administration: Use the contents within 24 hours of first broaching of the vial. Discard the unused portion.

The recommended dose is 1 mL STARMEC Ivermectin Injection for Cattle per 50kg liveweight (equivalent to 200 µg ivermectin per kg liveweight) by subcutaneous injection. DO NOT administer by the intravenous or intramuscular route.

Liveweight (kg)	Dose volume (mL)	Treatments per 500mL

Active constituent: 20 g/L SPINOSAD.

Recommended applicator: iO 30ml Applicator with 4 hole T Bar Kit (31845).

Dosage & Administration: Apply iO SPINOFF POUR-ON evenly along the backline from the poll to the base of the tail using a manual or powered applicator with an iO SPINOFF POUR-ON 4-hole t-bar nozzle. Halve the dose volume and apply in 2 bands, approximately 5 cm from the mid-point of the backline on each side. Applying the product to the flanks will improve the spread of iO SPINOFF POUR-ON.

For the treatment and control of moxidectin sensitive gastrointestinal parasites (including benzimidazole and/or levamisole resistant strains), lungworm and itch mite of sheep. An aid in the control of selenium responsive conditions.

Moxistar LV is highly effective against gastrointestinal parasites including Barber's Pole worm, Black scour worm, Stomach hair worm, Small brown stomach worm, Small intestinal worm, Thin necked intestinal worm, Intestinal threadworm, Nodule worm, Large mouthed bowel worm, Large

lungworm & itch mite.

Active Constituent: 2 g/LMoxidectin1 g/LSelenium (as Sodium selenate)

Dosage and Administration: MOXISTAR LV Se is ready to use. Administer 1 mL per 10 kg liveweight using any standard drenching equipment to give a dose of 0.2 mg moxidectin/kg and 0.1mg selenium/kg liveweight. Check dose rates and equipment before drenching commences.

Withholding Periods:

- MEAT: DO NOT USE less than 7 days before slaughter for human consumption.
- MILK: DO NOT USE in ewes which are producing or may in the future produce milk that may be used or processed for human consumption.
- EXPORT SLAUGHTER INTERVAL (ESI): DO NOT USE less than 7 days before slaughter for export.

Short Description

Convenient one shot Ivermectin injection for control of ivermectin sensitive internal and external parasites in cattle. For those producers which prefer injections vs pour-ons, Starmec injection will do the job.

Active Constituent

10mg/ml Ivermectin

Product Sizes

500ml

Made in Australia

1

Containing moxidectin in a long-acting formulation, it provides sustained control of internal parasites in sheep during periods of challenge.

Active Ingredient: 20mg/ml Moxidectin

Dose Rate: 1mg moxidectin/kg Liveweight (1ml/20kg liveweight)

Benefits

- Provides control of internal parasites in sheep
- Contains moxidectin, a highly potent member of the macrocyclic lactone (ML) family
- Effective against parasites susceptible to ML drenches, including gastrointestinal roundworms and large lungworm
- ≥91 days persistent activity against Barber's Pole worm and Small Brown Stomach worm
- Up to 49 days persistent activity against Black Scour worm
- Up to 4 months protection during severe Barber's Pole worm challenge
- Long duration of activity may reduce the need for frequent drenching
- Suitable for use in highly contaminated pastures
- Controls nasal bot (larval stages) and itch mite
- Simple subcutaneous injection for ease of application
- Wide margin of safety when used as directed

When administered at the recommended dose rate, Moxistar LA Sheep Injection provides:

- At least 91 days persistent activity against Barber's Pole worm (Haemonchus contortus)
- At least 91 days persistent activity against Small Brown Stomach worm (Teladorsagia circumcincta)
- Up to 49 days persistent activity against Black Scour worm (Trichostrongylus spp.)
- During periods of severe Barber's Pole worm challenge, protection may extend for up to 4 months when used as directed.
- Provides long-acting control of key internal parasites in sheep, including extended protection against barber's pole worm and small brown stomach worm.
- Delivers persistent activity against black scour worm and helps protect sheep under heavy parasite challenge.

Withholding Period/ESI

- Meat: 91 days
- Milk: Do not use in female sheep which are producing, or may in the future produce, milk or milk products for human consumption

- ESI: 133 days

Short Description

Convenient one shot Ivermectin injection for control of ivermectin sensitive internal and external parasites in cattle. For those producers which prefer injections vs pour-ons, Starmec injection will do the job.

Active Constituent

10mg/ml Ivermectin

Product Sizes

500ml

Made in Australia

1

Designed for use where resistance to single actives may be present, Tripletec LV supports effective parasite control in modern livestock systems. By combining three actives from different chemical groups, it helps address worm populations that may not be adequately controlled by single-active drenches alone.

The low-volume formulation supports simple, accurate dosing (1 mL per 10 kg), helping improve consistency across mobs and reduce the risk of under-dosing.

Tripletec LV also includes selenium and cobalt to assist with trace element supplementation in sheep and cattle grazing in areas where these minerals may be deficient.

Active Ingredients

Levamisole Hydrochloride 80 g/L, Oxfendazole 45.3 g/L, Cobalt 5 g/L (as disodium cobalt EDTA), Abamectin 2 g/L, Selenium 1 g/L (as sodium selenate)

Dosage

1ml/10kg body weight by single oral administration. Refer to the label for further information

Key Benefits

- Triple-active, 3-way mineralised combination drench
- Broad internal parasite control for sheep and cattle
- Suitable for use where resistance to single actives may be present
- Low-volume formulation for simple, accurate dosing
- Supports integrated parasite management programs
- Includes selenium and cobalt for use in deficient areas

Effective Against

- Sheep & Cattle – Gastrointestinal Roundworms, including:
- Barber's Pole Worm
- Black Scour Worm
- Small Brown Stomach Worm
- Cooperia spp.
- Nematodirus spp.
- and other common internal parasites

Withholding Periods

Meat: DO NOT USE less than 21 days before slaughter for human consumption.

Milk (Cattle): DO NOT USE in lactating cows or within 28 days of calving where milk or milk products will be used for human consumption.
If cows calve earlier than 20 days after treatment, milk may contain residues.
This milk MUST NOT BE USED for human consumption, or supplied for processing for at least 28 days following treatment.
Calves fed this milk should not be slaughtered for human consumption within 21 days.

Export Slaughter Interval (ESI)

Cattle: DO NOT USE less than 21 days before slaughter for export.
Sheep: DO NOT USE less than 28 days before slaughter for export.

Before using this product, confirm the current ESI from the distributor on (03) 5820 8400 or the APVMA website (apvma.gov.au/residues).Breed Category

iO Tick Off is a ready-to-use pour-on formulation. iO Tick Off breaks the tick life cycle. When treated with iO Tick Off, immature ticks are unable to molt to the next stage of their life cycle, and no larvae will hatch from eggs laid by treated females.

Active Constituent

25g/L Fluazuron
Solvents:
100 g/L 1-dodecyl-2-pyrrolidone
100 g/L 1-octyl-2-pyrrolidone
415 g/L 1-methyl-2-pyrrolidone

Dose Rates & Administration Instructions

Apply iO Tick Off in two bands, roughly 7cm wide, one on each side of the spine between the rump and the shoulders. Only 3 maximum treatments per tick season annually. Make sure you re-treat when you first see ticks but not before at least six weeks after the previous treatment. QLD, NSW, WA & NT only

Body Weight	Dose (ml)	no. treated per 5L	no. treated per 20L

Highly effective against most strains of Barbers Pole Worm – including strains resistant to other anthelmintics. POLE-AXE™ contains naphthalophos, a member of the organophosphorus family of chemicals.

Active Constituent: 800 g/kg Naphthalophos

Controls & Prevents: It is effective against organophosphate susceptible strains of mature and immature stages of Barber's Pole worm (Haemonchus contortus), Stomach Hair worm (Trichostrongylus axei), Black Scour worm (Trichostrongylus spp.), Small Brown Stomach worm (Ostertagia spp.), and mature stages of Thin Necked Intestinal worm (Nematodirus spp.) in sheep and lambs.

Dose Rates & Administration Instructions: POLE-AXE™ mixes readily with all types of water. Its high suspendibility ensures a consistent uniform suspension during drenching. Refer to product label for administration doses.

Active Constituent: 5 g/L Ivermectin.

Dose Rates: The dose is 1mL for each 10kg of liveweight. Dose the mob according to the heaviest animal by liveweight in each group (cows, bulls, calves, heifers etc.).

When there is a large variation in size within the group, draft into two or more lines based on bodyweight, to avoid overdosing. Do not underdose. Cattle should be weighed with either scales or with a weigh band.

Controls & Prevents: For the treatment and control of ivermectin sensitive:

Gastrointestinal nematodes:
Adult and immature (L4): Small Brown Stomach Worm (including inhibited stages) (Ostertagia ostertagi), Barber's Pole Worm (Haemonchus placei), Stomach Hair Worm (Trichostrongylus axei), Intestinal Hair Worm (T. colubriformis), Small Intestinal Worm (Cooperia spp.), Nodule Worm (Oesophagostomum radiatum); and Adult stages of Cooperia oncophora, C. punctata, Oesophagostomum venulosum, Whip Worm (Trichuris spp.), Intestinal Threadworm (Strongyloides papillosis); and Immature stages (L4) of Thin Necked Intestinal Worm (Nematodirus spp.).

Lungworms: (adult and immature) Dictyocaulus viviparus.
Eyeworm: Thelazia spp. (adult stages).
Sucking and Biting Lice: Linognathus vituli, Haematopinus eurysternus, Bovicola bovis, Solenopotes capillatus.
Mites: Chorioptes bovis, Sarcoptes scabiei var bovis.
Buffalo Flies: Haematobia irritans exigua g. Cattle Ticks: (Boophilus microplus) including organophosphate, synthetic pyrethroid- and amidine-resistant strains.

Administration Instructions: This product is formulated only for external application to cattle; do not use in other species. The formulation should be applied along the topline in a narrow strip extending from the withers to the tailhead.

1

Active Constituent: 16g/L Ivermectin

Dose Rates & Administration Instructions: JETTING FOR BLOWFLY STRIKE: When applied as directed by hand jetting or by modified Harrington jetting race JET AWAY BLOWFLY AND LICE JETTING FLUID FOR SHEEP protects sheep against strike by blowflies (Lucilia cuprina, L. sericata, Chrysomya rufifacies and Calliphora nociva) (including OP resistant strains of Lucilia cuprina) for 12 weeks under low to moderate fly pressure and will control maggots in existing strikes in the treated areas.
HAND DRESSING OF STRUCK SHEEP: JET AWAY can be applied at the blowfly dilution rate for treatment of blowfly strike wounds. Sheep should be sheared/clipped around the strike wound before saturating the area.
HAND JETTING FOR LICE: When applied as directed by hand-jetting JET AWAY also treats biting lice (Bovicola ovis), including synthetic pyrethroid resistant strains in long woolled sheep until the next shearing. Testing has confirmed that JET AWAY mixes with waters of various hardness. Use either a jetting handpiece with multiple nozzles that can be combed through the fleece or a “Dutjet” jetting wand. The jetting handpiece should deliver a penetrating jet of fluid without producing a spray or mist. A modified Harrington jetting race can also be used.

Active Constituent

10mg/ml Ivermectin

Product Sizes

500ml

Made in Australia

1

Active Constituent: 50 g/L Dicyclanil

Controls & Prevents: For the protection of mulesing and marking wounds on sheep against fly strike (*Lucilia cuprina*) during the wound healing process.

Dose Rates: The dose volume is determined by the weight of sheep being treated.

Administration Instructions

Apply iO Flyk Spray-On according to the diagrams and tables in the Directions for Use. DO NOT DILUTE. Apply directly from the container or an appropriate back pack using a spray-on applicator gun recommended by The Hunter River Company. iO Flyk Spray-On may be applied to all breeds of sheep to obtain protection against fly strike.
Significant soiling with dags, mud, dust or urine may reduce efficacy. Where significant dags are present, a light crutching is indicated prior to treatment. Protection period may be reduced if sheep scour heavily following application.

For the Prevention of Body Strike (Diagram 1)

Sheep Weight (kg)	Total Volume / Sheep (mL)	Volume per Treatment Band (mL)	No. of Bands	No. of Sheep Treated per 20L
10–20	14	7	2	1428
21–30	16	8	2	1250
31–50	20	10	2	1000
>50	24	12	2	833

For the Prevention of Breech Strike (Diagram 1)

Sheep Weight (kg)	Total Volume / Sheep (mL)	Volume per Treatment Band (mL)	No. of Bands	No. of Sheep Treated per 20L
10–20	7	7	1	2857
21–30	8	8	1	2500
31–50	10	10	1	2000
>50	12	12	1	1666

For the Prevention of Poll Strike (Diagram 1)

Rams and sheep susceptible to poll strike should be treated. Apply 5mL of iO Fly to the areas requiring protection, around the poll and horns.

For the Prevention of Fly Strike After Mulesing (Diagram 2)

Apply two bands, one over each side of the mulesing wound and overlapping 25mm onto the surrounding wool.

Sheep Weight (kg)	Total Volume / Sheep (mL)	Volume per Treatment Band (mL)	No. of Bands	No. of Sheep Treated per 20L
Up to 30	8	4	2	2500
31–50	10	5	2	2000

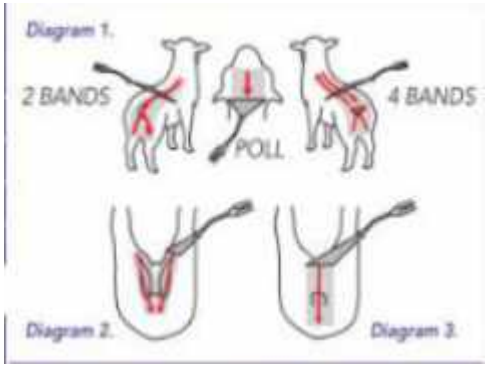

For the Prevention of Fly Strike After Marking (Diagram 3)

- When a tail has been amputated, apply 4mL over the crotch, ensuring sufficient coverage of the open wound.

- When the tail has not been amputated, ensure sufficient coverage of the tail where the rubber ring has been applied.

- In the case of ram lambs, a further 4mL can be sprayed over and around the scrotum area after the rubber ring has been applied.

Lambs Weight (<30 kg)	Total Volume / Lamb (mL)	Volume per Treatment Band (mL)	No. of Bands	No. of Lambs Treated per 20L
Ram lambs	8	4	2	2500
Ewe lambs	4	4	1	5000

Critical Comments

- Use only a spray-on applicator gun recommended by The Hunter River Company.
- Ensure the applicator gun is clean.
- Calibrate applicator gun using an accurate volume measure.
- Ensure all areas to be protected are treated.
- When preventing body strike ensure bands overlap along the midline.
- When protecting mulesing wounds from fly strike, treat the wound and surrounding 25mm of wool.
- When protecting marking wounds from fly strike, treat the wound and surrounding wool.

- This product is not recommended for treating existing strikes. Use a registered product as a dressing.

- Heavy rain following application may diminish protection.

- iO Fly Spray-On contains a scourable colouring agent for easy identification.

- Withholding periods must be observed following application.

Short Description

Convenient one shot Ivermectin injection for control of ivermectin sensitive internal and external parasites in cattle. For those producers which prefer injections vs pour-ons, Starmec injection will do the job.

Active Constituent

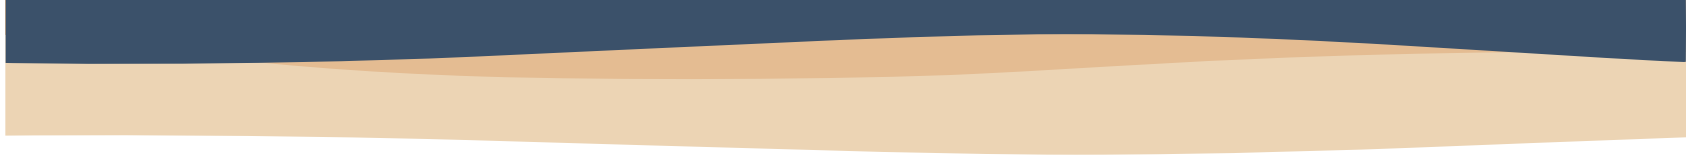

10mg/ml Ivermectin

Product Sizes

500ml

Made in Australia

1

Active Constituent: 65 g/L Dicyclanil

Available size: 20L

Dose Rates: The dose volume is determined by the weight of sheep being treated. Please refer to the label for further information

Withholding Periods:
Meat: Do not use less than 14 days before slaughter for human consumption.
ESI: DO NOT USE less than 9 weeks before slaughter or export.
Milk: Do not use on ewes which are producing or may in the future produce milk that may be used or processed for human consumption.
Wool: Do not use less than 3 months before shearing or fibre collection.

Storage: Store below 30°C (Room Temperature). Do not freeze. Protect from light. Store in original container tightly closed in a dry, cool place.

Applicator: iO 30ml Variable Applicator

Recycle containers via drumMUSTER

Active Constituent: 10mg/ml Ivermectin and 75mg/ml Praziquantel

iO Equiduo (Ivermectin and Praziquantel) has been formulated for administration by oral drench or stomach tube (nasogastric intubation). One low-volume dose is effective against important internal parasites, including tapeworms and the arterial stages of Strongylus vulgaris, and bots.

Controls & Prevents: Treats Tapeworms, Roundworms/Ascarids, Small Strongylus, Large Strongylus, Intestinal Threadworms, Large Mouth Stomach Worms, Pinworms, Lungworms, Bots & Hairworms.

Dose Rates & Administration Instructions: Each 50mL bottle contains sufficient ivermectin and praziquantel to treat 5 x 500kg horses. The recommended dose is 1mL iO Equiduo per 50kg liveweight (equivalent to 200mg ivermectin per kg liveweight and 1.5 mg praziquantel per kg liveweight). iO Equiduo can be given as an oral drench or by stomach tube (nasogastric intubation). Nasogastric intubation should only be done by a veterinarian or under veterinary supervision.

Containing Eprinomectin, one of the world's most potent endectocides, iO Eprinomax provides broad-spectrum control of internal and external parasites with the flexibility of Nil meat and Nil milk withholding periods.

Active Constituent: 5 mg/ml Eprinomectin

Dosage: 1ml per 10kg live weigh. For external use only. Refer to label for further instructions.

Controls & Prevents: For the treatment and control of gastrointestinal roundworms (including inhibited immature *Ostertagia ostertagi*) and lungworm in cattle. For sucking and biting lice, sarcoptic and chorioptic mange mites, and buffalo fly in beef and dairy cattle. iO EPRINOMAX Pour-On aids in control of cattle tick (*Rhipicephalus microplus*). For the treatment and control of gastrointestinal roundworms and lungworm in deer.

Recommended Applicators: Large cattle (300kg +): iO Pour-on applicator 65ml. Smaller cattle (up to 300kg): iO Drench/Pour-On applicator 30mL.

Rapidly kills and destroys lice very soon after treatment.

Active Constituent: 350g/L Temephos. Solvent: Liquid hydrocarbons 492 g/L

Made in Australia.

Dose Rates & Administration Instructions: Yard sheep the night before dipping. Ensure adequate water is available. Preferably dip early in the morning and allow sheep to dry before nightfall. No need to reinforce the dip as the dip is non stripping, making it a simple application. Can be applied to wet or dry sheep.

Store below 30 degrees.

Dipping Management The sheep should be thoroughly wetted. Sheep lice live on the skin of the sheep and complete saturation of the fleece is necessary. In a plunge dip each sheep should swim for at least 30 seconds and have its head plunged under twice. Shower dips should be checked prior to commencement of dipping to ensure that the pump and nozzles are operating at the correct pressure and volumes as stipulated by the manufacturer.Breed Category

Levistar LV contains levamisole, a member of the imidazothiazole (clear) group of anthelmintics (drenches) and is effective in cattle and sheep against: mature and immature Barber's Pole Worm, Stomach Hair Worm, Black Scour Worm, Small Intestinal worm (Cooperia spp.), Thin Necked Intestinal Worm, Hookworm,
Large Mouthed Bowel Worm, Strongyloides, Nodule and Large Bowel Worms, Large Lungworm and Small Brown Stomach Worm in sheep and mature (adult only) Ostertagia spp. in cattle under 12 months of age. Where Ostertagia are the problem in cattle over 12 months of age, Starmec Pour-On for Beef and Dairy Cattle is the recommended product.

Controls both susceptible and benzimidazole resistant strains
of Barber's pole worm (Haemonchus species) and Black scour worm (Trichostrongylus species) in sheep.

Active constituents: 80 g/L Levamisole Hydrochloride (equivalent to 68 g/L Levamisole)

Dosing and Administration: Levistar LV is given as a drench by mouth in cattle and sheep.

Dose rate for Cattle: 5ml per 50kg live weight. The liveweight should be estimated carefully so that the dose can be calculated accurately. Cattle heavier than 650kg should be dosed at 5ml for 50kg. Refer to the label for further dose rates.

Dose rate for Sheep: 1ml per 10kg liveweight. always dose on liveweight basis. Sheep heavier than 80kg should be dosed at 1ml per 10kg. Refer to the label for further dose rates.

Withholding periods:

Meat: DO NOT USE less than 3 days before slaughter for human consumption.
Milk: Zero (0) days.
Trade Advice: Export Slaughter Interval (ESI): DO NOT USE less than 7 days before slaughter for export.Breed Category

Pack size: Contains 5 x 500 g measure packs which it is illegal to sell separately.

Administration Instructions: This pack dissolves on contact with water. Open outer sachet. To dissolve in water, simply tip inner soluble pack directly into bucket and stir. Dispense as per mixing instructions advised on label.

Dosage and Administration:

ROUTINE TICK CONTROL (NSW, QLD, VIC, NT only):
For routine control of specific types of ticks on cattle, apply EXITRAZ at the following intervals:

CATTLE TICK (Rhipicephalus [Boophilus] microplus): intervals of 19 to 21 days.

BUSH TICK (NZ CATTLE TICK) (Haemaphysalis longicornis): intervals of 7 to 21 days.

PARALYSIS TICK (Ixodes holocyclus): intervals of 7 to 10 days.

DO NOT leave longer intervals between treatments when ticks are active. For further information consult your Stock Inspector, District Veterinary Officer or Tick Extension Officer.

Active Constituent: 300 MG/ML Triclabendazole & 5 MG/ML Abamectin

Available in the following sizes: 1L, 2.5L, 5L,15L

Dosing & Administration:

HRC Abatech Ultra Pour On dose rate is 1 mL/ 10 kg body weight.

Apply along the backline of the animal, using a standard pour-on applicator, in a strip starting between the shoulder blades. This product is not to be given orally or injected.

Liveweight (kg)	Dose Vol (mL)	No. of Cattle Treated	
1L	2.5 L	5 L	15 L
51 – 75	7.5	133	333 666 2000
76 – 100	10	100	250 500 1500
101 – 125	12.5	80	200 400 1200
126 – 150	15	66	166 333 1000

151 – 175	17.5	57	142	285	857
176 – 200	20	50	125	250	750
201 – 250	25	40	100	200	600
251 – 300	30	33	83	166	500
301 – 350	35	28	71	142	428
351 – 400	40	25	62	125	375
401 – 450	45	22	55	111	333
451 – 500	50	20	50	100	300
501 – 550	55	18	45	90	272
551 – 600	60	16	41	83	250
601 – 650	65	15	38	76	230

For animals heavier than 650 kg, dose at a rate of 1 mL/ 10 kg body weight.

A representative sample of animals should be weighed before treatment either with scales or weighband. Dose according to the heaviest animal by liveweight in the group (cows, bulls, calves, heifers, etc.). Do not underdose. Where there is a large variation in size within the group, draft into two or more lines based on bodyweight, to avoid excessive overdosing.

Abatech Ultra Pour On is rainfast. Rain occurring as early as 2 hours after treatment will not affect the efficacy of the product.

Made in Australia

1

Active constituents: 2.0 G/L Abamectin, 1.0 G/L Selenium (as sodium selenate)

Dosage & administration: 1mL per 10kg bodyweight. Refer to the label for further dose rates.

Target parasites: Abastar Plus Selenium LV contains abamectin, a member of the avermectin family of drenches. It is effective against abamectin sensitive strains of the following internal parasites:

Adult and immature gastrointestinal roundworms:
Barber's pole worm – Haemonchus contortus
Small brown stomach worms – Ostertagia spp.
Black scour worms – Trichostrongylus spp.
Small intestinal worms – Cooperia spp.
Thin-necked intestinal worms – Nematodirus spp.
Large bowel worm – Oesophagostomum venulosum
Lungworm: Dictyocaulus filaria
For the control of Sheep Nasal Bot – Oestrus ovis

Recommended Applicator: 30mL Variable Applicator

Withholding periods:

Meat: DO NOT USE less than 14 days before slaughter for human consumption.
Milk: DO NOT USE in lactating ewes where milk may be used or processed for human consumption

Trade Advice – Export Slaughter Interval (ESI): An ESI has not been established for this product.

Features:

- Wide safety margin when administered to cattle & pigs.
- Low irritant formulation, which will minimise any potential reaction to the injection site post administration.
- Broad spectrum treatment for the control of gastrointestinal roundworms, lungworms, sucking lice, biting lice, cattle tick and mange mites.
- The most reliable and accurate dosage format, which ensures animals receive the optimal dose.

Active Constituent: 10 mg/mL Doramectin

Application: Metal Drencher 20mL with Injector Conversion Kit.

Dosing & Administration: Use contents within 28 days of first broaching of the vial. Store upright. Discard the unused portion. Use a multi-dose syringe for multiple treatments to minimise the number of broachings.

CATTLE: 1 mL per 50 kg of bodyweight SC

PIGS: 1 mL per 33 kg (0.3 mL per 10 kg) of bodyweight IM

Nil meat and milk withholding provides flexibility particularly if clearing cattle of ticks prior to sale. Following treatment, cattle will be clean of ticks within 3-4 days, with larval ticks prevented from attaching for up to 7 days post treatment.

Active Constituent: 125 g/L Amitraz

Available in the following sizes: 400ML & 2L

Application: Coarse Spray with pump

Dosing & Administration

LIVESTOCK	PEST	STATE	RATE	CRITICAL COMMENTS
Cattle	Cattle Tick [Rhipicephalus (Boophilus) microplus]	NSW, QLD, WA and NT only	400mL per 200L water	Treat at intervals of 19-21 days Controls organophosphate and synthetic pyrethroid resistant strains of the Cattle Tick.Refer also to General Directions
	Paralysis Tick (Ixodes holocyclus)	NSW, QLD, WA and NT only	400mL per 200L water	Treat at intervals of 7-10 days Controls organophosphate and synthetic pyrethroid resistant strains of the Cattle Tick.Refer also to General Directions
	Bush Tick (NZ Cattle Tick) (Haemaphysalis longicornis)	NSW, QLD, WA, NT and VIC	400mL per 200L water	Treat at intervals of 7-21 days Controls organophosphate and synthetic pyrethroid resistant strains of the Cattle Tick.Refer also to General Directions
Sheep, goats, deer and certain circus animals	Cattle Tick [Rhipicephalus(Boophilus) microplus]	NSW only	400mL per 200L water	Treat animals on quarantined holdings at 14 to 21 day intervals. Treat animals being moved at 3 to 7 day intervals.
Pigs	Mange (Sarcoptes scabiei var. suis)	All States	40 mL per 10L water	Remove feed and bedding from pens, cover drinking bowls and clean out pen. Spray pigs with minimum 2L spray wash, especially inside ears and legs, under jowls and areas covered by scabs. Replace discarded bedding with clean material. Repeat treatment after 7-10 days. Refer also to General Directions.

Designed for use where resistance to single actives may be present, Tripletec HV supports effective parasite control in modern sheep systems. By combining actives from different chemical groups, it helps address worm populations that may not be adequately controlled by single-active drenches alone.

Tripletec HV is effective against susceptible, single and dual resistant parasite strains and also provides control of additional parasites including lungworm, nasal bot (larval stages) and itch mite.

Tripletec HV also includes selenium and cobalt to assist with trace element supplementation in sheep grazing in areas where these minerals may be deficient.

Dosage

Dose orally without dilution using standard, properly calibrated drench equipment. Animals heavier than 80kg to be dosed at 1ml per 4kg liveweight.

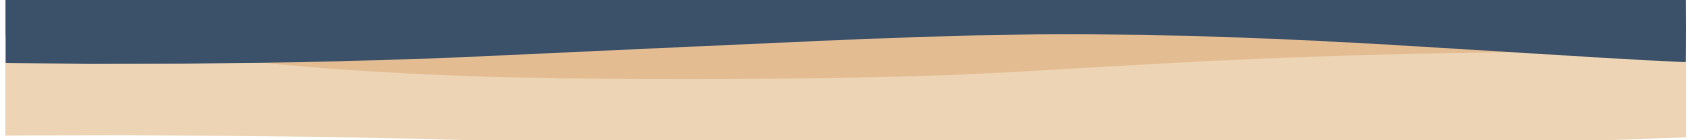

Weight Range (9kg)	Dose Volume (ml)	Doses per 20L Pack
9-12	3	6666
13-16	4	5000
17-20	5	4000
21-24	6	3333
25-28	7	2857
29-32	8	2500
33-36	9	2222
37-40	10	2000
41-50	12.5	1600
51-60	15	1333
61-70	17.5	1142
71-80	20	1000

Active Ingredients

Levamisole (as hydrochloride) 25.5 g/L, Albendazole 20 g/L, Cobalt 1.76 g/L (as EDTA), Abamectin 0.8 g/L, Selenium 0.4 g/L (as sodium selenate)

Key Benefits

- Triple-active, 3-way combination drench
- Broad internal parasite control for sheep
- Suitable for use where resistance to single actives may be present
- Supports integrated parasite management programs
- Effective against susceptible, single and dual resistant strains

- Controls additional parasites including lungworm, nasal bot (larval stages) and itch mite

- Includes selenium and cobalt for use in deficient areas

Effective Against

- Sheep – Internal parasites, including:

- Barber's Pole Worm

- Black Scour Worm

- Small Brown Stomach Worm

- Cooperia spp.

- Nematodirus spp.

- Lungworm, nasal bot (larvae) and itch mite

Withholding Periods

Meat: DO NOT USE less than 14 days before slaughter for human consumption.

Export Slaughter Interval (ESI)

DO NOT USE less than 42 days before slaughter for export.

Before using this product, confirm the current ESI from the distributor on (03) 5820 8400 or the APVMA website (apvma.gov.au/residues).

Controls & Prevents: For control of Stable Fly (Stomoxys calcitrans), House Fly (Musca domestica) and Lice (Bovicola bovis, Linognathus vituli and Haematopinus eurysternus) and synthetic pyrethroid susceptible Buffalo Fly (Haematobia irritans exigua) on beef and dairy cattle.
For control of synthetic pyrethroid susceptible Buffalo Fly (Haematobia irritans exigua) for up to 3 weeks and for control of Stable Fly (Stomoxys calcitrans) for up to 1 week on horses. Provides protection from the Biting Midge (Culicoides brevitarsus) for at least 14 days with effective control of blood feeding C. brevitarsus for 6 days post treatment.

Active Constituent: 15.0g/L Deltamethrin

Dose Rates for Cattle: 5mL per 100kg liveweight.

The following table may be used as a guide.

Pests Controlled	Rate	Live Body Weight	Critical Comments
Cattle Lice (*Bovicola bovis*) (*Lignognathus vituli*) (*Haematopinus eurysternus*) Buffalo Fly *(Haematobia irritans exigua)* Stable Fly (*Stomaxys calcitrans*) House Fly (*Musca domestica*) Biting Midge *(Culicoides sp.)*	5 mL 15mL 30mL	Up to 100kg 10mL 101-200kg 201-300kg 20mL 301-400kg 25mL 401-500kg 501-600kg For cattle over 600kg apply 5mL per 100kg liveweight	Apply to animals in a race or drainage pen as a single stripe along the backline. Retreat later in the season if reinfestation occurs. Apply to the whole herd – retreatment may be necessary.

Dose Rate for Horses: 5mL per 100kg liveweight.

The following table may be used as a guide.

Pests Controlled	Rate	Live Body Weight	Critical Comments

Buffalo Fly (*Haematobia irritans exigua*) Stable Fly (*Stomoxys calcitrans*)	5 mL Up to 100kg 10mL 101-200kg 15mL 201-300kg 20mL 301-400kg 25mL 401-500kg 30mL 501-600kg For horses over 600kg apply 5mL per 100kg liveweight	Using the correct measured dose, apply to horses as two single stripes. Apply approximately 2/3 of measured dose to the midline mane area (from poll to wither) and remaining 1/3 to midline over the rump. When applying product keep away from head forward of the ears. If product is accidentally splashed into horse's eyes, the eyes should be washed thoroughly as soon as possible, using plenty of water. Contact a veterinary surgeon for advice. Apply to the whole herd – retreatment may be necessary.

Quick Facts & Benefits: Protects sheep against re-infestation with lice for 4 weeks after treatment when applied within 24 hours of shearing.
May be used in conjunction with worm control drenches and at the same time as vaccination.
Contains a blue dye to identify treated sheep. This dye is scourable from the wool. Is safe for use on breeding rams.
Proudly Australian Made & Owned.

Active Constituent: 35 g/L Imidacloprid Also contains: 300 g/L N-Methyl-2-Pyrrolidone (solvent)

Dose Rates & Administration Instructions: Refer to the dosage table on label. One 20L pack will treat 333 sheep & one 5L pack will treat 83 sheep (based on 30.1 – 55kg body weight).

Recommended Applicators: Apply product only with the 6-stripe applicator.

Active Constituent: 200 g/L Chlorfenvinphos (an anticholinesterase compound)

Application: Backrubber or overspray.

Dosing & Administration:

Pest: Buffalo fly (Haematobia iriritans exigua)

Treatment: Application by backrubber. Make backrubber available to cattle each day and all day during the buffalo fly season.

State: QLD, WA, NSW, NT only

Rate: Mix 1 L EXIGUARD Buffalo Fly Insecticide per 20 L of new, non-recycled motor oil or clean mineral oil. Charge backrubber with 20 mL treated new, non-recycled motor oil or clean mineral oil per animal every three weeks. Do not exceed this rate.

Critical comments: Refer to mixing instructions on the label.

NOT TO BE USED ON ANIMALS PRODUCING MILK FOR HUMAN CONSUMPTION WHEN TREATMENT IS BY BACKRUBBER APPLICATION."
