

Rejuvenate tired horse paddocks, repair bare areas and establish resilient pasture with iO Equine Pasture Blend, a specially selected pasture seed blend developed with horses and pasture longevity in mind.

Combining a diverse mix of grasses and clovers, iO Equine Pasture is designed to provide palatable grazing, a lower sugar profile and dense, persistent ground cover when moisture is available. The blend is particularly suited to areas exposed to regular hoof traffic, helping maintain valuable ground cover around gateways, water troughs, feeding areas and other high-use parts of the paddock.

Suitable for establishing new areas, oversewing existing pasture or patching worn and bare ground, iO Equine Pasture can also be easily hand broadcast, making it a practical option for areas where machinery can't easily reach.

Available in a convenient 8kg bucket, with enough seed to cover approximately two-thirds of an acre (30kg/ha).

Made with horses in mind

The grass varieties used in iO Equine Pasture are endophyte free, providing a carefully selected pasture option for equine use. The blend also offers a lower sugar profile, helping support pasture and grazing management for horse owners looking to better manage feed intake and body condition.

Benefits of iO Equine Pasture

- Specially selected pasture blend for horses

- Made using endophyte-free grass varieties
- Lower sugar profile
- Provides palatable grazing when moisture is available
- Helps establish dense, persistent ground cover
- Suitable for worn and high-traffic paddock areas
- Ideal for oversowing, repairing bare areas or establishing pasture
- Easy to hand broadcast where machinery can't reach
- Helps suppress weeds and protect exposed soil by maintaining ground cover

What's in the blend?

Prairie Grass | Fine Feed Annual Ryegrass | Caretaker II Perennial Ryegrass | Treposno Cocksfoot | Balansa Clover | Campeda Sub Clover | Kentucky Bluegrass | Creeping Red Fescue
